LANDSCAPE ARCHITECTURE

BRAUN

GROWING PICTURE

At the back of the Vienna museum quarter the 3 x 3 m vertical garden entices passers-by to enter the Viennese inn. The differing structures of the plants and the pattern of the colored sections dominate the three-dimensional image. Some 150 plant species, mainly perennials and some woody plants, grow on both sides of the panel – sunny and shady. Species were selected according to their suitability for the local climate and the extreme vertical location: plants that predominantly grow naturally in the herb layer of forests or on rocky, nutrient-poor ground.
